----------------------------	------------------------	---------------------------	---

Programas educativos adicionales para los extranjeros: **1**

Programa de preparación preuniversitaria	El estudio de la lengua rusa como extranjera 1	Programas cortos	Otros programas
--	--	------------------	-----------------

Samara University was founded after a merger of two famous institutions of higher education — SSAU and SamSU. Today, it is a unique science and education center that trains experts in the fields of aerospace technologies, fundamental technical, natural and humanitarian sciences.

The united university has 16 faculties. Students study cutting-edge biotechnologies design materials with specific properties, and develop new nanostructured materials. They can build and launch their own satellites into orbit, participate in designing spacecraft, and take part in various scientific experiments.

Additionally, students also study fundamental social processes, work on preserving cultural and linguistic heritage, and train to become university professors and researchers.

They can make use of a 3D printer, the Sergey Korolev super-computer, and even their own test aerodrome. In the University's design bureaus, students build Yastreb light aircraft, work on models of missile carriers that they regularly launch at the Biscarros Testing Grounds (France). The team of Samara University is the only Russian participant in the C'Space Festival.

Éxito de los estudiantes

La asociación internacional

Olimpiads

	<u>Time to study in Russia!</u>	Dates and locations of tests are available on the Rossotrudnichestvo website.	SSAU is a member of the consortium of leading Russian technical universities, which holds the "Time to study in Russia!" academic competition in various countries. The winners have the right to study at one of the universities on a Russian government funding (quota). The competition is held under the aegis of Rossotrudnichestvo and with the support of the Russian Ministry of Education and Science.
